

Now There Is A Better Way To Manage Your Network

Untangle delivers an on-demand suite of applications that run on a single server and will change the way you think about network software. Untangle lets you:

- **control** network activities that reduce productivity such as spam and inappropriate web surfing,
- enable **anytime anywhere access** for remote employees, and
- **protect** your computers and data from outside threats such as viruses, spyware, botnets, and phishing.

The Untangle interface is easy to navigate and manage.

Best of Breed Open Source Solutions

Untangle provides immediate access to over 30 open source projects (including SpamAssassin, Vipul's Razor, ClamAV, and OpenVPN), packaged into 14 fully integrated applications that deploy in minutes. Untangle has done all the heavy lifting, delivering:

- Full reporting
- Automatic updates
- Graphical management console
- Active Directory Integration
- Policy Management
- Full support
- And much, much more

"It's the simplest way I've found to control our network."

Jaron Daily
Project Architect
BGO Architects, L.P.

With Untangle, you are joining a large community of peers who are active participants in the product and its development.

 - Remote Access Portal
 - Monitoring
 - Untangle Reports
 - Networking
 - Router
 - Configuration Backup

"We've experienced zero spyware issues since we installed Untangle"

Christopher E. Christiansen
Director, IT Services
CeloNova BioSciences, Inc.

"Right away, spam was down ninety-five percent."

Brian Welker
President
Sunridge Properties, Inc.

"We have peace of mind knowing that we are protected"

Craig Brown
Controller
Summer Hill Ltd.

"Nobody has ever supported me the way Untangle has. It's been remarkable"

Dan Nickason
IT Manager
Genesis Physicians Group

Never Trade Off Performance

Untangle's Network Virtualization technology eliminates the large latencies associated with moving data through multiple applications. Compared with the legacy method of proxy chaining, Network Virtualization does not require excess context switches and buffer copies that can result in exponentially growing time delays with each new application. With Untangle, your data flows at full speed.

Untangle's Network Virtualization technology shares traffic data across all software services with minimal latencies.

Built for the Future

Untangle is a software platform. As new applications are released, you can activate them on your server. You never need to purchase more hardware for your network. Untangle protects your investment and keeps you up-to-date with the latest innovations in network technologies.

Affordable & Easy to Get Started

Untangle delivers unprecedented value for your IT dollar. Say goodbye to per user licensing. Untangle keeps it simple with a single subscription sized for your company. And with Untangle's ease of implementation, you can try new applications in a matter of minutes without disruption to the rest of your network.

Deployment Options

Untangle software can be installed on any Intel compatible server. For your convenience, Untangle also offer a selection of servers that come with the Untangle Gateway Platform pre-installed – just plug and play. The *Untangle Pre-Installed Server* datasheet lists options and minimum system requirements.
